Obituary

The death of Mrs. Etta Sayles which occurred at the home of her daughter, Mrs. A. W. Jopling, on Wednesday morning, December 20th, in her 76th year, caused widespread regret among the many friends she had made in this community. Deceased had enjoyed fair health until three months ago when an infected foot caused considerable trouble and eventually led to her death.

Etta Gredell was born in Etta, Maine, in 1857. In 1873 she was married to John Harris Sayles and spent most of her married life in Colorado. During her residence there she took an active interest in many movements intended for the welfare of the community.

She was a faithful wife, a loving self-sacrificing mother, a kind and hospitable neighbor, loved by all who knew her. Her death was the closing chapter of a beautiful life.

In her immediate family she is survived by a husband John H. Sayles of Fruita, Colorado; three daughters, Mrs. Harry Harris of Grand Junction, Colorado, Mrs. Jay Daulton, of Blackwell, Oklahoma, and Mrs. A. W. Jopling of Champion; one sister, Mrs. U. Carro of Grand Rapids, Michigan; and five grandchildren. A son predeceased her in 1928.

Shivers Funeral Establishment are in charge of the funeral arrangements. The funeral will be held at 2 o'clock Friday and interment will be made in the Burnsland cemetery.

The sympathy of the community is extended to Mrs. Jopling in her bereavement.

Honored

A shower in honor of Miss Mary Cook, a bride-to-be, was given at the home of Mr. and Mrs. Cook on Tuesday evening when Mrs. R. U. Brown and Mrs. R. Haskayne acted as joint hostesses. The room was beautifully decorated in pink and white streamers covered with icicles, and evergreen boughs added a touch of Christmas. Court whist was played after which the bride was seated under a canopy of wedding bells and presented with many beautiful gifts from a decorated Christmas tree.

Miss Mary Cook was the guest of honor at a miscellaneous shower at the home of Mrs. Lebeau of Vulcan, on Saturday December 16. The room was tastefully decorated in Christmas colors and a beautifully decorated basket, heaped high with gifts was presented to the bride-to-be.

GRAND XMAS DANCE

Friday, December 22. Max Kenney and his Versatile Musicians. Even if you don't dance, you will enjoy this music.

Extend Period Tax Payments

Hon. R. G. Reid, Minister of Municipal Affairs has announced that due to the condition of the roads throughout the Province it has been found impossible in many cases to haul grain and livestock to the markets. As a consequence large numbers of taxpayers find themselves unable to meet the payments falling due on December 15th under the agreements made with the municipalities and the Department for the consolidation of arrears of taxes under the provisions of the Tax Consolidation Act. The government feels in fairness to the taxing authorities and the public in general an extension of time should be granted, which will make these payments, and instructions to towns, villages and municipal districts to accept payments under these agreements up to and including December 31st, 1933, have been issued. Legislation will be introduced at the next session of the House to validate this extension.

Donald Cassidy Funeral Held

Attended by many friends of the family from both Turner Valley and Calgary, and many of the deceased lad's school chums, funeral service for the late Donald Cassidy, nine-year-old Black Diamond boy, were held Monday morning.

Requiem mass was conducted by Rev. Father E. H. Mulvihill in St. Mary's Cathedral, and interment followed in the family plot in St. Mary's cemetery. Pallbearers were four chums of the deceased, Victor Moore, Paul O'Byrne, Edward and Frank Mackay. Jacques funeral residence was in charge.

The boy died Friday in a local hospital from injuries received in the accidental discharge of a shotgun a week ago. He is survived by his mother, four sisters, Loretti, Rita, Leone and Sheila, and two brothers, Ivor and Kevin.

The Girls' Club met at the home of Mrs. Gatenby on Saturday evening and Christmas gifts were exchanged. A turkey pull was immensely enjoyed by all after which refreshments were served by the hostess.

Keep in mind the big New Year's Ball on New Year's night, January 1st.

Britain Shows The Way

When one reads of the very little accomplished by the World Economic Conference, and of the adjournment of the World Disarmament Conference without any results having been achieved, and coupled with these failures to advance the cause of peace, official announcement is made of re-arming in Germany, of the fact that Japan has just begun to build a fleet of a great programme of cruisers construction by the United States, of hundreds of millions spent on fortifications by France, one is inclined to ask: Are the nations of the world determined on self-destruction, and is it their desire that civilization as we now know it shall be destroyed?

When we recall the efforts made following the Great War to set up the League of Nations as a form of international machinery to maintain and promote the peace of the world, as we recall that in the years of 1918 the League has, on more than one occasion, been instrumental in preventing war, but that more recently it failed to check Japanese aggression in China and Manchuria; as we witness Japan's defiance of the League and withdrawal from it, followed by the withdrawal of Germany, and now the threatened resignation of Italy, we are further inclined to ask: Is there no nation that can and will give leadership to the world in the cause of peace?

Is physical disarmament the first and necessary step to an assurance of peace? If so, then Great Britain has provided leadership, but, alas, the other nations have refused to follow.

Speaking in the House of Lords recently, Lord Londonderry, Secretary for Air in the National Government, stated that Britain has only 850 first line airplanes compared with 1,050 in France, from 1,400 to 1,500 in Russia, 2,000 to 1,100 in the United States, and 3,000 to 1,100 in Italy. Britain's first line aircraft have been reduced to little more than 20 per cent of her post-war strength with the new states in the number of her military and naval airplanes only fifth in the list of nations.

Sir John Simon, Foreign Secretary of Britain, in a recent review of Britain's efforts to set an example in disarmament, stated in simple terms that Britain has not an example to follow. "No reasonable or instructed person can possibly suggest," said Sir John, "that we have not reduced our armaments to the lowest point to which we could go by unilateral action, and that we should be thought a waste of time if I gave the House three or four figures."

Of the British Navy, Sir John Simon then said:

"Take the Navy—I am going to give comparisons not in the end of the war when we had piled up enormous forces, I am going to the year in which the war began."

"Since 1914 the capital ships of the British Commonwealth have been reduced from 69 to 12, its cruisers from 125 to 39, its submarines from 152, and its auxiliary ships from 7,300 to 1,100. In 1914 we had a class of vessels called a torpedo boat, of which there were 106 in commission in 1914. They have disappeared entirely. At the same time there has been a reduction in personnel, as compared with 1914, of 152,000 men."

So much for leadership in naval disarmament given by Britain. Sir John Simon continued: "Take the Army—Since 1914, the regular Army has been reduced from 258,000 to 205,343. This has been effected by disbanding nine regiments of cavalry, 41 batteries and companies of artillery, 21 companies of Royal Engineers, and 21 battalions of Infantry and three batteries of Colonial troops. At the same time the Special Reserve has been reduced from 80,120 to 24,600, and the Territorial Army from 141,702 to 312,000. In 1914 it was 312,000; today it is 170,000. In addition, during the same period, 18 regiments of cavalry, 31 battalions of Infantry and seven battalions of pioneers have been disbanded by the Indian Army. That has resulted in an approximate 70,000 of 170,000 men."

Instead of following this wonderful leadership of Great Britain in disarmament, the great nations of the world have actually increased their fighting forces and voted larger annual budgets than ever before in times of peace. If disarmament fails, the British Commonwealth cannot be held in any sense responsible or blameworthy. Britain has done its part; the world has refused to follow.

As a result, the world to-day is drifting, if indeed, it is not actually rushing, into war. And the question arises, after all, the right way to encourage and induce disarmament by the British Commonwealth is that in Britain's action in so sharply reducing her own armaments, other nations saw an opportunity to secure unto themselves greater power; an opportunity to achieve certain national ends by the use of force.

The failure of other nations to follow Britain's lead in disarmament only serves to prove what has been stated in this column on previous occasions, i.e., that physical disarmament by the nations is not good enough; it is not a sufficient guarantee of peace, in fact, it is a guarantee of disaster and not by all it may even prove provocative of war. What is necessary, what is fact must precede physical disarmament, is a mental and spiritual disarmament by the people themselves. They must free themselves of their narrow nationalistic ideas, their suspicions of other people and nations, their racial and religious passions and prejudices. These are the things that cause war, and as long as people entertain and cherish such thoughts and ideas, and as long as other people entertain such thoughts and ideas, there will be war. This mental and spiritual disarmament among the peoples of the world must come first; until it does come there will be little headway made in the matter of physical disarmament. Without the former, the latter form of disarmament would be vain in any event.

It has been demonstrated that the British Commonwealth has more far-reaching disarmament for the betterment of mankind. She cannot do more than maintain the force of her example and promote her educational propaganda. It remains for the rest of the nations to follow Britain's example.

Luxury Flats in England

Better For Fishermen

Block Will Contain Thirty Shops For Convenience Of Tenants

A block of luxury flats, which will occupy three acres of ground and contain 360 flats and 30 shops, is planned to be erected at Hammer-smith, London, England. It is expected to be the largest single block of flats in Britain.

There will be a private automobile roadway running under one side of the flats, according to the architect's design, and tenants will be able to shop in comfort without going outside the building. Over 1,000 men will be employed on the site during its construction. It is estimated, 1,000,000.

"Any man can be a fool and not know it," declares a playwriter. Any man, that is, except a married man.

German, Dutch Baites Price On Exits From Canada

Import duty recently imposed by the German government on Quebec fish, has resulted in higher prices being obtained by Canadian fishermen for their product. Last year the average price received was three cents per pound, but now the price is from five to six cents.

Something like 500,000 pounds of Canadian fish are going to Europe this year, with a similar quantity destined for New York and German.

A man may make the earthly coil, but he must pay the debt of nature as he goes.

Household Drudgery

The Bane of a Woman's Life

Nature intended women to be strong and healthy instead of weak and sickly, but how can a woman have good health when she has to go through the household drudgery without any relaxation. If it were possible she would become nervous and irritable, has lost her appetite, and suffers from indigestion, nervousness, and sleepless nights, and can't sleep at night.

Milburn's H. & N. Pills will find in the system and bring back to much desired health.

STARTS PROCEEDINGS

Has Been Transformed

Paris Royal Station Has Been Made Into "American Bar"

The "Royal Railroad Station" in Paris, used especially to welcome kings and queens, and where President Woodrow Wilson was received in triumph by Clemenceau and Poincaré in 1918, has been transformed, in part into a tea room and an "American Bar."

It still is used for local traffic, however, but its days of pomp and circumstance are over.

During the presidencies of Loubet and Fallieres, this "Railroad Station of the Kings" was used to welcome monarchs like Edward VII, Victor Emmanuel, "Carmen Sylva," Queen of Roumania, Oscar II, of Sweden, and King George V of England.

With the liberal use of red carpets, flowers and brilliantly uniformed soldiers, it was transformed into a temporary palace. Here it was that the armistice in 1918 Woodrow Wilson alighted to receive the plaudits of a delirious Parisian population.

Of late, however, the station has ceased to be the "Gare des Rois."

The kings arrive at the larger stations. The pomp with which they are received has been reduced to a minimum and often even the station officials are unaware of the entrance of a crowned head.

Parliament Will Meet January Twenty-Fifth

Many Matters Of Importance Among Themes Of Debate

Parliament will be summoned on Jan. 25, and it has been learned officially that 25 new members chosen at by-elections in West-Quebec-Madawaska, and in the Yukon, will be introduced. All are Liberals. There is one vacancy, South Oxford, created by the death of Thomas Cayley, leader of the Conservative party.

Revision of the Bank Act and legislation setting up a central bank in Canada will be among the main themes of debate. It is anticipated, while unemployment relief and its supplementary factors, public works and unemployment insurance, will undoubtedly play a large part in the proceedings.

The present government, headed by Prime Minister R. B. Bennett, took office August 7, 1920. A short fact session has held immediately thereafter, and regular sessions each year since.

The standing of the parties in the approaching session will be: Conservatives, 137; Liberals, 85; L.-Pro-Progressives, 3; Progressives, 1; United Farmers of Alberta, 3; Labor, 3; Independent Labor, 1; Independent, 2; vacant, 1.

Had New Occupation

Bellboy Hung Out Of Window And Believed Valuable Pin

"Hung out window," read the report of a new bellboy at a hotel in St. John's, N.B. The bellboy, who had been in the hotel for a few days, had been told of routine activities puzzled the management.

Investigation revealed a fifth floor bellboy had thrown from the contents of a tray a valuable tickle pin. He saw the pin on a narrow ledge between the second and third stories. The bellboy volunteered to do a job of retrieving it from the third floor, and leaped out of a window while the manager and the bellboy looked on. Securing the pin, he was drawn back to safety.

"I'm going to leave, mum."

"Why, Ellen? I'm very sorry; you're such a hard-working girl."

"That's just it, Mum. I can't get enough to keep my head above water for four hours every night. I've to fool away my time sleeping."

Using Infra-Red Rays

Newly-Discovered Rays Taken Photographs Up To 300 Miles

Infra-red photography and its use in the detection of crime, as well as in medicine and dysentery research, was the subject of a lecture by Sir Robert Robertson, chief government chemist, before a joint meeting of the Society of Chemical Industry and the Royal Society of Medicine, on Thursday last.

Sir Robert began by explaining the position of infra-red rays relative to other rays. The whole range of known rays runs from wireless rays, which may be as much as a mile long, to cosmic rays which are infinitesimally short, he said. The cosmic rays have such energy that they will pierce through the thickness of a piece of lead. This is due to the fact that the frequency of vibration of a ray increases as its wave-length decreases. The infra-red rays are next in length above the familiar spectrum of visible light.

Sir Robert referred to some of the better-known uses of infra-red rays. These are in the detection of photography in which great advances have lately been made. The magnificent aerial photographs of the world's range were one instance, and in the United States landscape photography are being taken up to a distance of 300 miles. Such photographs are made possible by the use of infra-red rays, which are not scattered as are ordinary light rays and can there-fore penetrate fog.

The lecturer referred to the medical uses of this photography, which is valuable in the case of operating on such as varicose veins, and to the research which has been attempted by scientists interested in dysentery. It is the rays of infra-red light that are used to detect the clothes most suitable for wear in the tropics can be found by study of the extent to which different fabrics and dyes absorb the rays. Sir Robert expressed the opinion, however, that research would have to go much further. Swedish scientists have, for example, been unable to find a concrete result as yet.

Definite Improvement In Trade of Canada

BANK OF MONTREAL ANNUAL MEETING

Striking indications of the improvement in trade in world wide trade, as well as of the steady increase in foreign trade in Canada, were among the outstanding features of the addresses submitted at the annual meeting of the Bank of Montreal, Sir Charles Gordon, the president, in his address to shareholders, stated that practically the world over trade was better than a year ago, and that in Canada, for the better part of the year, definite improvement in business had been going on. Canada's external commerce had also grown in volume.

Sir Charles also had a cheerful word regarding improved conditions in Great Britain. The country's fate, in simple, well proved methods had not been justified, with the result that Britain's credit stood as high as ever, and London had regained its position as the financial centre of the world.

In regard to the question of banking in Canada, Sir Charles pointed out that two members of the Royal Commission were Canadian throughly versed in the banking and economic conditions of this country. These members were not in accord with the rest of the Commission in their findings. He drew attention to the fact that the Royal Commission had been set up to inquire into the banking and economic conditions of this country. These members were not in accord with the rest of the Commission in their findings. He drew attention to the fact that the Royal Commission had been set up to inquire into the banking and economic conditions of this country.

Sir Charles also had a cheerful word regarding improved conditions in Great Britain. The country's fate,

Heartiest Wishes
for a Happy Christmas
and a Prosperous New Year

C. R. LUCHIA

"We Appreciate Your Business"

May This Christmas
Be Your Merriest!

IF IT were possible for us to meet and
shake each other by the hand and say—
"Let us have faith and confidence in one
another" our troubles would be lightened.
The rough road we have been travelling
shows indications of becoming
smoother. Let us keep up our courage
and continue the fight through a spirit
of co-operation and good will and the
future will look brighter. May we
take this opportunity to extend to you and yours our most
sincere wish for a Happy Christmas and Prosperous New Year.

GRANLIN MOTORS

A Very Merry Christmas AND A Happy New Year

As we come to the end of another year it is the pious hope
of all of us that we are coming to the end of a long de-
pression.
To thank our friends for their business during these times is a distinct obli-
gation which we fervently discharge with the greatest sincerity.
May 1934 bring tangible evidence that stability, confidence
and prosperity will be with us soon.

MOFFATT'S HARDWARE
